

## A novel learning experience - KKN

We have seen that science and creativity put together has changed the course of mankind. The students of PSBB KKNAGAR studying in class XI witnessed the practical application of chemistry through an interactive seminar delivered by

Mr.Sambamurthy. His

talk gave the students an insight as to how chemistry can effectively help solve problems in everyday life. He aimed at igniting the young minds of the students through his demonstration of "THE ELECTROLYSIS OF BRINE WATER".

Mr.Sambamurthy and his team had implemented this project to overcome the problem of scarcity of drinking water in rural India in a cost efficient and durable manner, with main emphasis on how it can penetrate into the lowest strata of the society. He explained the working of the various components of the electrolyser and explained the construction of it. He stressed on the importance of safety and ensured that the process is simple

enough for the villagers to understand. The students had an enriching experience and wish to emulate Sir and his team.
