

A 'SCIENTIFIC' FIELD TRIP

The path of competency needs motivation and continuous learning.

Students of Std.8 were taken to visit the Science labs in Ramakrishna Mission Higher Secondary school, T. Nagar. It was a very interesting and informative experience in which students learnt science through hands on activities. The Astrophysics lab demonstrated lot of information on stars and eclipse formation. Experiments on topics like lenses, centripetal, centrifugal forces, kinetic and potential energy conversion, magnetism, pendulum grabbed the attention of the students. Models in the Biology lab explained human anatomy and physiology. The Chemistry lab was also interesting with tests on Acids and Bases, making of fuel from solid wastes, compost, learning the periodic table by play way method. The students' day out was very beneficial and harnessed lot of interest in learning science, which will improve their application of science in day-to-day life.
