

A Journey through Research

On 22 June 2022, Dr Nitya Subramaniam delivered a lecture for the students of Std 12 Science Stream- on the topic ‘A Journey through Research.’

Dr Nitya Subramaniam, an alumna of PSBB, was one of the students in the first batch of the Biotechnology course in our school. Her lecture was a concise summary of how she navigated through her life as a student, researcher and teacher. With the help of relatable examples, she taught students about what working as a scientist looks like and what they could do to achieve the same. With her practical insights, she guided them how to deal with hurdles and blocks that may arise in the field of research. She elaborated on her current research on mitochondrial cells and complex I deficiency leading to Parkinson’s disease, a neuromotor disorder. This was followed by an interesting and engaging question and answer session. It was indeed an informative and enriching lecture.
