

STEMming Into Quantum Computing

On the 24th of June 2022, students of class 10 and 12 (Science stream) had the privilege of being the audience for an enthralling lecture on quantum computing. The lecture was delivered by VS Nithyashri, alumna. It was a comprehensive one which gave a clear insight into the world of the upcoming field of quantum computing. Nithyashri seamlessly blended the curriculum taught in school with the basic concepts surrounding quantum computing which certainly served as a huge encouragement to pay attention to one's books! The interdisciplinary nature of quantum computing and research in general and how STEM comes into play at every stage was another topic on which light was shed. Students were left captivated and enthused till the very last word of the session and this was evident in the soaring levels of energy in the question- answer round as well. The session was wrapped up with the encouraging words of Senior Vice Principal, Mrs. Malathy Santhanam and a heart-warming vote of thanks. It has certainly opened the minds of the students to explore varied possibilities in future.
